AI INVIGILATION SYSTEM FOR ONLINE EXAMS | [LINK](#)
that detects Human faces.

Python For ML model and pre trained model

An Exam Cheating Detection Software is an AI-based system used to monitor students during online exams and detect suspicious activities like looking away, talking, using mobile phones, tab switching, or multiple people appearing on screen. It uses technologies such as webcam monitoring, face detection, eye tracking, audio analysis, and screen monitoring to maintain exam integrity and prevent cheating.
